

SCORM® Development

Since the first release of the SCORM in 2000, the i2d2 team has been developing and deploying SCORM conformant CBT/e-learning and Learning Management Systems

In the late 1990s, the US Department of Defense recognized that standardization was required to maximize the return on their e-learning investment. The outcome is SCORM, the **Shareable Content Object Reference Model**, which incorporates earlier specifications and guidelines and provides a technical platform that is independent of learning content.

Before the creation of the SCORM, e-learning and conventional Computer Based Training solutions could be difficult to deploy and costly to maintain. They frequently locked an organization into a single provider, or led to an ad-hoc collection of content delivery and management systems.

Today the SCORM has a critical momentum and is the de facto industry standard. It promotes six capabilities essential to the deployment of e-learning:

Implementing SCORM will protect your investment in e-learning and simplify its development and deployment.

Our experience and know-how will get you up and running quickly and with minimum hassle.

THE KEY OBJECTIVE OF THE SCORM IS TO PROVIDE:

- **Accessibility:** The ability to access learner material in one location and deliver it to many other locations.
- **Adaptability:** The ability to tailor instruction to individual learner and organizational needs.
- **Affordability:** The ability to increase productivity by reducing the time and costs of delivering instruction.
- **Durability:** The ability to withstand technology evolution and changes without costly redesign, coding or configuration.
- **Interoperability:** e-learning content deployed on one LMS can run without modification on another LMS.
- **Reusability:** The flexibility to use instructional components in multiple applications and contexts.
